## WORK EXPERIENCE

### Frontend Web Developer - Intern

Mira Technologies | MAY 2019 - OCTOBER 2019

Worked closely with our UI/UX designers and the manager in creating web applications that served the needs of our clients.

Single-handedly took some of our clients through training sessions on how to use our products.

Refactored long Javascript codebases on previous projects to shorter, cleaner and properly documented codes for ease in addition of functionality and improved performance.

### Personal Projects

JANUARY 2019 - PRESENT

TheWebFor5 (<https://thewebfor5.com>) - A technical blog platform founded by me, built from scratch with GatsbyJS. It's mobile responsive and has functionalities like Save Article, dark theme and so on.

CSS Flex Generator (<https://cssflex-generator.netlify.com/>) - A web application I built with a real time flex container, which users can manipulate to learn how flex works in CSS.

## SKILLS

Web Design  
Technical Writing  
Public Speaking  
Graphics Design

## STACK

HTML5, CSS3, Javascript, Git/GitHub

ReactJS, GatsbyJS, NodeJS.
